

Press Release, Linköping 2004-09-08

Agama Technologies AB launched, new company in the IP-TV market

At IBC 2004, the new company Agama Technologies AB is presenting products and services for IP-TV operators, equipment vendors and manufacturers.

Agama Technologies AB is devoted to be the leading provider of products and services enabling high quality digital distribution of media over IP networks.

The first product from Agama Technologies AB is RIA – a real time IP-TV monitoring solution enabling operators to ensure that their IP-TV services are working correctly. RIA is based on a full analysis of the TV transmission from network to picture level, understanding what errors will result in visible distortion for the viewer. By combining this full understanding of the service with multiple monitoring points, it is possible to get a good grip of the service level as experienced by the customers. This enables an operator to quickly identify and fix potential problems and to comply with Service Level Agreements (SLA) as needed by the business arrangements.

Current users of RIA includes Agder / Ella in Norway, NVE in Denmark, Sollentuna Energi and the National Test-bed initiative, both in Sweden.

RIA was previously owned and sold under the name Slipstream by ESDG Konsult AB. Agama Technologies AB is privately held by the founders.
