

Press Release, Linköping 2005-09-09

Agama presents integration with Content protection in version 2.2 of the Agama IPTV Monitoring Solution

Agama Technologies AB today announces version 2.2 of the Agama IPTV Monitoring Solution. New functions include integration APIs for Conditional Access systems, video thumbnails and Content analysis which detects error condition such as black screen and freeze frame.

Also new in this version is support for monitoring channels with forward error correction (FEC-4) for contribution applications.

By offering a complete end to end monitoring solution that fully understands the IPTV service stack, Agamas IPTV Monitoring solution gives operators confidence in delivered quality. The inclusion of integration APIs for conditional access allows operators to ensure service quality even if the content is encrypted. Objective measurements of delivered quality, reporting functions such as SLA Compliance reports and real time alarms all improve service quality.

"Having a high service quality is a competitive necessity in today's marketplace" says Managing Director Mikael Dahlgren, "Agamas solution is the only IPTV Monitoring system that can monitor not only network parameters but also content down to picture level, even if encrypted. "

The Agama IPTV Monitoring Solution supports multiple codecs (including MPEG-2 and AVC) in standard and high definition (HD TV) over both UDP and RTP transport in IP networks.

Agama 2.2 will be available for demonstration at IBC 2005, where Agama will be exhibiting in Hall 3, stand 125.
