

Agama and Ericsson selected to Secure IPTV Quality at major Central European Telecom operator

(LINKÖPING, March 11, 2008) – Agama Technologies today proudly announces that a major Central European Telecom operator has selected the Agama IPTV Monitoring Solution for extensive end-to-end service assurance. The business is executed through Agama’s partner Ericsson Nikola Tesla acting as system integrator.

Deploying a successful IPTV Service is in many ways a challenging task. Viewers expect the highest quality while the IPTV service itself introduces new and higher demands on the IP network. Service quality is an important core business value with TV service operators and one way to stay in control is to implement a service assurance solution. At Agama we have made it our business to understand the needs of the TV service operators, and as quality assurance solutions have evolved from technical stand-alone tools to mission-critical solutions Agama has remained a pioneer provider of end-to-end, multi-metric monitoring solutions.

“The Agama solution helped us to deliver a complete end-to-end IPTV quality measurement solution to our customer. We were especially pleased with Agama’s flexibility and speed in product customization that enabled us to fulfil all customer requirements”, says Stjepan Cerovecki, Account Manager, Ericsson Nikola Tesla.

“We are very proud to have won this business together with Ericsson Nikola Tesla – it proves that our solution meets the high expectations of the major Telecom operators and that it can scale to meet the needs of a large installation. Working with a global systems integrator further enhances our offering in local markets. We are thrilled to be a part in assuring this major IPTV service offering” says Mikael Dahlgren, Managing Director of Agama Technologies. *“The approach towards quality assurance by IPTV operators worldwide has entered a new level and we are looking forward to being an essential part of the progress and growth within the industry.”*

The Agama IPTV Monitoring Solution is a complete line of products which ensures IPTV service quality through the whole delivery chain from head-end to the viewer’s STB. Powered by our unique multi-metric monitoring, the solution enables operators to take control of the service from the transport to the content layers supporting all parts of the organization, from NOC and customer care to management.
